                                                                                                                                                                                                                                                                          This sequence encodes the LM609 antibody variable light chain region. LM609 and the antibody vitaxin bind selectively to integrin alphavbeta3 and can be used to inhibit binding of alphavbeta3 to a ligand and thus block integrin—mediated signal transduction. This is useful in the treatment, prevention and diagnosis of alphavbeta3-mediated disease, specifically angiogenesis and restenosis (but also e.g. (non )immune inflammation, diabetic retinopathy, neovascular glaucoma, cancer, psorlasis, rheumatoid arthritis, macular degeneration, osteoporosis etc.). The antibodies contain non-murine framework regions so are suitable for use in humans. Enhanced types of LM609 have affinity more than 90 times greater than that of parent the parent antibody.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               240

                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The present invention relates to enhanced LM609 grafted antibodies exhibiting selective binding affinity to alphaVbeta_3 integrin or their functional fragments. The antibodies or their functional fragments can be used in the diagnosis and treatment of alphaVbeta_3-mediated diseases such as angiogenesis, inflammatory diseases (such as psoriasis and chronic articular rheumatism), disorders associated with inappropriate or inopportune invasion of cancer disorders such as tumours and Kaposi's sarcomal, retinal diseases (such as macular degeneration), restenosis and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    AGGTTCAGTGGCAGTGGATCAGGGACAGATTTCGCTCTCAGTATCAACAGTGTGGAGAGTT

They also claim a recombinant antibody against FHV-1 and fragments of VH and VL CDR1, CDR2 and CDR3. The antbodies are used in the detection, treatment and prevention of FHV-1. The sequences of the CDRs in the VH of the recombinant anti-FHV-1 antibody are given in AAR54092. The sequences of the CDRs in the VL cthe recombinant anti-FHV-1 antibody are given in AAR54093. These CDR

The present invention describes a method of producing humanised immunoglobulins involving expressing in a cell a nucleic acid encoding a humanised version of an immunoglobulin. This is obtained by comparing a donor and human immunoglobulin and producing a combined antibody which contains part of each. These are useful in the treatment of graft-versus-host disease, transplant rejection, autoimmune diseases such as diabetes, rheumatoid arthritis, myasthenia gravis, multiple sclerosis and systemic lupus erythematosus, herpes infections, CMV virus infections and myeloid leukaemia. The present sequence is an antibody cDNA used to demonstrate the method of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Humanised immunoglobulin; mouse; human; antibody; heavy chain; diabetes; light chain; graft versus host disease; transplant; autoimmune disease; multiple sclerosis; rheumatoid arthritis; systemic lupus erythematosus; myasthenia gravis; herpes infection; myeloid leukaemia; CMV infection;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                This DNA sequence codes for the light chain variable region (see ANY22405) of murine monoclonal antibody VTml-1 (MuVTml-1), an antibody that specifically binds to the B subunit of verotoxin II (VT2). The invention relates to humanised antibodies against VT2 that are capable of neutralizing VT2 and/or VT2 variants. The humanised antibody is a humanized form of MuVTml-1 comprising the complementarity determining regions of MuVTml-1 and heavy and light chain variable region frameworks from the human GF4 antibody

heavy and light chain frameworks, provided that at least 1 position selected from L49, H29, H30, H49 and H98 is occupied by the amino acid at the equivalent position of the MuvTmi-1 antibody heavy or light chain variable region framework. Such humanized antibodies (see AAY32406-07) have an affinity for VT2 that is 3-, 5 or 10-times that of MuVTmi-1. They are used for treating a patient suffering from, or at risk of, the toxic effects from VT2 (claimed), especially for treating verotoxin producing Escherichia coli (VTEC) infection, and haemolytic uraemic syndrome (HUS).
                                                                                                                                                                                                                                                                                                                         Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Humanised antibody; monoclonal antibody; MAb; antibody engineering;

cee AAW84094) of the anti-human alphav beta-3 vitronectin receptor murine monoclonal antibody D12. It was obtained from hybridoma to the monoclonal antibody D12. It was obtained from hybridoma to the monoclonal antibody D12. It was obtained from hybridoma to the manoclonal antibody D12. It was obtained from hybridoma to the monoclonal antibody D12. It was obtained by the man by RT-PCR using mouse kappe and N-terminal-based primers (see AAV71808-09). A heavy chain variable region clone (see AAV71797) has also been identified. D12 VH and VL show sequence similarity to Kabat VK subgroup III (see AAW84098) were constructed by combining the framework regions of the chaman variable sequences with complementarity determining regions of D12 (keeping some preferred murine framework residues). The humanised antibodies are specifically reactive with the human alpha-v beta-3 protein receptor and capable of neutralising the receptor. They can be used for passive immunotherapy of a disorder disorders or anglogenic-related disorders, such as angiogenesis disorders or anglogenic-related disorders, such as angiogenesis createnosis, chronic inflammatory disorders, macular degeneration, resumatoid arthritis and cancer, e.g. solid tumour metastasis, and disacases where bone resorption is associated with pathology such as consequenced by bone metastasis, bone closs due to immobilisation or sex hormone deficiency. WH and VL chain sequences were obtd. by PCR amplification of RNA from murine Mint5 hybridoma DSM ACC2150 and fused to human C-gammal and CK genes. Constructs were expressed in CHO cell transfectants. chwint5 shows lower immunogenicity than Mint5 when administered to humans. It can be

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       /product= "vitaxin antibody light chain variable region" /note= "partial sequence, no start or stop codon given"
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        This sequence encodes the vitaxin antibody variable light chain region. Vitaxin and the antibody LM609 bind selectively to integrin alphavbeta3 and can be used to inhibit binding of alphavbeta3 to a ligand and thus block integrin-mediated signal transduction. This is useful in the treatment, prevention and diagnosis of alphavbeta3-mediated disease, specifically anglogenesis and restenosis (but also e.g. (non-)immune finflammantion, diabetic retinopathy, neovascular glaucoma, cancer, psoriasis, rheumatoid arthritis, macular degeneration, osteoporosis etc.). The antibodies contain non-murine framework regions so are suitable for use in humans. Enhanced types of LM609 have affinity more than the contain the contain the contain the contain the contain the contain the contain the contain the contain the contain the contain the contain the contain the contain the contain the contain the contain the contain the contain the contain the contain the contain the contain the contain the contain the contain the contain the contain the contain the contain the contain the contain the contain the contain the contain the contain the contain the contain the contain the contain the contain the contain the contain the contain the contain the contain the contain the contain the contain the contain the contain the contain the contain the contain the contain the contain the contain the contain the contain the contain the contain the contain the contain the contain the contain the contain the contain the contain the contain the contain the contain the contain the contain the contain the contain the contain the contain the contain the contain the contain the contain the contain the contain the contain the contain the contain the contain the contain the contain the contain the contain the contain the contain the contain the contain the contain the contain the contain the contain the contain the contain the contain the contain the contain the contain the contain the contain the contain the contain the contain the contain the contain the

This sequence encodes a LM609 grafted antibody variable light chain alphavoberata and can be used to inhibit binding of alphavobeta on a ligand and thus block integrin-mediated signal transduction. This is useful in the treatment, prevention and diagnosis of alphavbeta3-mediated disease, specifically angiogenesis and restenosis (but also e.g. (non-)immune inflammation, diabetLc retinopathy, neovascular glaucoma, cancer, psorlasis, rheumatoid arthritis, macular degeneration, osteoporosis etc.). The antibodies contain non-murine framework regions so are sultable for use in humans. Enhanced types of LM609 have affinity more than 90 times greater than that of parent the parent antibody.
integrin - and related grafted antibodies based on murine monoclonal LM609, also related nucleic acid, used to treat, prevent or diagnose
                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Sequence 321 BP; 76 A; 93 C; 78 G; 71 T; 3 other;

remains to gravity to represent special control of activities depending on the tissues cheek series a range of activities depending on the tissues they were isolated from human, mouse, chicken and rate tissues cheek were isolated from the activities include:

chemotactic; proliferative; immunomdulatory; haematopoietic;

chemotactic; analgesic; haemostatic; thrombolytic; antiinflammatory;

chemotactic; antibacterial; antifuncar; osteopathic; neuroprotective;

antiasthmatic; vulnerary; antiloger; osteopathic; neuroprotective;

nootropic; antiparkinsonian; antipsoriatic; cerebroprotective;

carticonvulsant; and antidepressant. The sESTS can be used for gene therapy and in vaccines. The sESTS are useful as probes for the identification and isolation of full-length cDNAs and genomic DNA and enclecules which correspond to the sESTS. Proteins encoded by the sESTS are useful in assays for determining biological activity and raising antibodies. They may be useful for treatment of autoimmune disorders (multiple sclerosis, insulin dependent diabetes), allergic conditions (asthma), myeloid or lymphoid cell deficiencies, wounds, burns, ulcers, osteoporosis, osteoarthritis, central nervous system disorders (Alzheimer's, Parkinson's, Huntington's disease, stroke), coagulation disorders (haemophilia, thrombosis), inflammatory disorders (crom's Alascase), tumours, bacterial, fungal or viral infections, depression and soriasis. AAA45916 to AAA4591 represent linker variants which are given

The present invention relates to enhanced LM609 grafted antibodies exhibiting selective binding affinity to alphaVbeta_3 integrin or their functional fragments. The antibodies or their functional fragments can be used in the diagnosis and treatment of alphaVbeta_3-mediated diseases such as angiogenesis, inflammatory diseases (such as psoriasis and chronic articular rheumatism), disorders associated with inappropriate or inopportune invasion of vessels (such as diabetic retinopathy, neovascular glaucoma and cancer disorders such as tumours and Kaposi's sarcoma), retinal diseases (such as macular degeneration), restenosis and

The present sequence represents an expression vector for expressing the light chain of a chimeric anti-CD40 antibody designated chi220. The antibodies are effective in modulating humoral immune response against T cell dependent antigens, collagen induced arthritis and transplant induced rejection. They are also useful for their anti-inflammatory properties. The antibodies have wide therapeutic anti-inflammatory properties. The antibodies have wide therapeutic transplantation. The antibody can be used in a pharmaceutical composition for treating a patient suffering from a T cell mediated disorder. They can also be used to treat autoimmune diseases, inflammatory diseases,
Antibody that binds human CD40, for treating T cell mediated
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Sequence 8858 BP; 2396 A; 2124 C; 1950 G; 2387 T; 1 other;

                                                                                 AAT38509 and AAT38510 represent the coding sequences for the variable regions of the heavy and light chains of the antibody of the invention. This sequence is stated in the specification as being 372 bp in length, but only comprises 363 bp. The antibody of the invention (designated BAB-1-1) is a monoclonal antibody (MAb) specific for human 4-IBB. 4-IBB encodes a member of the tumour necrosis factor receptor family of integral membrane proteins. 4-IBB is an accessory molecule expressed on the surface of T-cells in the initial stage of activation. The accessory antigen-presenting cell bind to the corresponding ligand on the antigen-presenting cell and this accelerates the activation of the T- and antigen-presenting cells, thereby promoting various immune responses. The MAb is specific for human 4-IBB, which is selectively expressed on activated T-cells. The MAb is useful as an immunosuppressive agent. It

Patent No. 6066718
GENERAL INFORMATION:
GENERAL INFORMATION:
APPLICANT: Hardman, No. 6066718man
APPLICANT: Kollinger, Frank
APPLICANT: Saldanha, Jose
TITLE OF INVENTION: Reshaped monoclonal antibodies against
TITLE OF INVENTION: immunoglobulin isotype
NUMBER OF SEQUENCES: 55
CORRESPONDENCE ADDRESS:
                                                                                                                                                                                                                                                                                                               /product= "light chain variable domain of murine antibody TES-C21"
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            PatentIn Release #1.0, Version #1.25

Scoring table:

Searched:

```
Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Query
